MCAST Part-time course on “Java Intermediate”

## ***INTERESTS***

Almost all computer related activities such as gaming and trying different programs and Operating systems, Swimming, Volleyball and Football. A special interest in organising activities and in team-leadership.

## ***PAST EXPERIENCES***

I am currently employed with Kordin Grain Terminal Co. Ltd. doing all of the I.T. duties a company's I.T. Departement may need such as creating and maintaining databases, writing software packages and team leading projects, repairing and replacing hardware, creating and maintaining websites and providing I.T. consultations to the management regarding the subject.

I also used to work at the Mirabelle Restaurant on a Part Time basis as a waiter as well as at the Dolmen Resort Malta and at the Grand Hotel Mercure San Antonio.

On an individual basis, I do small tasks such as formatting, repairing and assembling computers, software creations and installations, creating and maintaining websites and also creating Databases as a hobby, which is still one of my revenue-generation.

Also in my free time, I pass some time doing voluntary works in the Parish of Zebbug. I used to do the visual presentations on a

projected screen during the 7pm mass on Sunday as well as managing light and sound equipment. Today, I was assigned (by the Archpriest) a team leading role. I am teaching a group of teenagers/youths on religious values as well as organising and leading big events well known in our locality. I am currently attending an evening course related to team building and leading, which I will be finalising this year.

I am also the administrator of some websites: the Zebbug Parish website ([www.parroccazebbug.com](http://www.parroccazebbug.com)), my private site ([www.keithcutajar.com](http://www.keithcutajar.com)), an iron worker's site ([www.bcironwork.com](http://www.bcironwork.com)), our companies site ([www.kordingrain.com.mt](http://www.kordingrain.com.mt)), Qormi Football nursery which I was assigned to repair some of its functionality ([www.qorminursery.com](http://www.qorminursery.com)) and also in the making of another which still in its design.

### ***Other Comments***

I am currently attending my fourth year course of B.Sc. (Hons) I.T. at the University of Malta, doing my thesis on Concurrency Software Engineering, a Computer Science stream increasing in importance due to multi-core CPU architectures improvements.
